

FORBES AGENCIES LIMITED

Company Profile · Forbes 2.0

Technology that is built to move.

Forbes Agencies Limited brings together technology infrastructure, cybersecurity, digital solutions, consultancy and dependable procurement for organisations that need technology to work in the real world.

The company is entering a new chapter under Forbes Agencies Limited. The approach is practical: understand the requirement, shape the right solution, supply what is needed, and connect the technology to implementation and support where appropriate.

Our capability areas

- **Connect** — Network and infrastructure planning, deployment, maintenance and practical IT environments.
- **Protect** — Cybersecurity, CCTV, biometrics, access control and technology controls.
- **Transform** — Cloud and digital transformation, web experiences, automation and AI readiness.
- **Supply** — IT equipment, software and licences, office equipment, accessories and general supplies.
- **Advise** — Technology consultancy, specification, upgrade guidance and solution planning.
- **Support** — Managed IT, troubleshooting, maintenance, configuration and user support.

Supply Desk

The Supply Desk gives procurement a clear commercial home. Requirements can begin with equipment, software, licences, office supplies or general items. Where details are known, Forbes can work from quantity, preferred specification, budget range, timing and delivery location. Where the specification is not yet clear, the requirement can be shaped before quotation.

- **IT equipment:** laptops, desktops, printers, peripherals, computer parts, accessories and networking equipment.
- **Software and licences:** operating systems, productivity software, software licences, installation and configuration.
- **Office and general supplies:** office equipment, stationery, printer consumables and client-specific sourcing.
- **Supply and deployment:** procurement connected with installation, configuration, testing and end-user support where agreed.

How we work

- 01 · **Requirement** — Understand the business need, users, environment, quantity and timing.
- 02 · **Specification** — Clarify the practical technical or procurement specification.
- 03 · **Solution / quotation** — Build the requested commercial conversation around the requirement.
- 04 · **Delivery / implementation** — Coordinate supply and, where agreed, connect it to setup or support.

Forbes 2.0

Forbes Agencies began operations in January 2009. The earlier company profile described a total-solutions approach covering technology services, equipment, software, consultancy, training, maintenance and general supplies. Forbes Agencies Limited carries that foundation into a new chapter, with a clearer digital, security and procurement proposition.

This profile intentionally focuses on documented capability and the direction of the current business. Project history and client references can be shared or expanded where appropriate and where the underlying information is available.

Historical capability foundation

- Computer hardware, parts, accessories and software.
- Networking, infrastructure maintenance and technical support.
- Software installation, upgrades, backup and restoration support.
- Systems implementation, user training, data entry and data collection.
- Systems and network audits, IT specification and upgrade advice.
- Quotation sourcing, office equipment, software licences and general supplies.
- Renovation, painting and other general services recorded in the earlier company profile.

Start a conversation

Tell us what you are trying to achieve, what you need to source, or where your technology environment needs attention. The first conversation can start with an outcome rather than a perfect technical specification.
